

## Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually a tool made out of top quality materials designed to be able to endure the most difficult operations and work environments. This piece of equipment can enable the one driving to operate the blades hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate lifting and position in a quicker and more effective manner.

The unique blade pocket design enables operators to safely swing the unit's blades without any fear of damaging the positioning cylinders. This can allow the operator the alternative to either execute independent or simultaneous fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into fork positioners on existing units.
